the determination of epoxide groups Benzo[a]pyrene is a polycyclic aromatic hydrocarbon and the result of incomplete combustion of organic matter at temperatures between 300 °C (572 °F) and 600 °C (1,112 °F).The ubiquitous compound can be found in coal tar, tobacco smoke and many foods, especially grilled meats. The substance with the formula C<sub>20</sub>H<sub>12</sub> is one of the benzopyrenes, formed by a benzene ring fused to pyrene.

the determination of epoxide groups 1. Introduction. Cardiovascular diseases are the leading cause of death worldwide. More than 20 million people died due to cardiovascular diseases in 2015 [].Among these, coronary heart disease and stroke were responsible for approximately 80% of the casualties [].Cardiovascular diseases are caused by accumulation of fat on the inner walls of blood vessels [].

the determination of epoxide groups Preparation and reactions. It is prepared by O-alkylation of bisphenol A with epichlorohydrin. This reaction mainly affords bisphenol A diglycidyl ether, as well as some oligomer. The degree of polymerization may be as low as 0.1. The epoxide content of such epoxy resins is of interest.

the determination of epoxide groups The flask containing the reaction slurry is then attached to a rotary evaporator with the bath at room temperature. The bump bulb (250 mL) (Note 3) is chilled in a dry ice/acetone bath and a vacuum of 155 mmHg is applied via a benchtop diaphragm pump and an accompanied in-line vacuum regulator. During this process, the flask is rotated vigorously (210 rpm) to prevent bumping of the slurry into ...
