the developing human brain The human brain is the central organ of the human nervous system, and with the spinal cord makes up the central nervous system. The brain consists of the cerebrum, the brainstem and the cerebellum. It controls most of the activities of the body, processing, integrating, and coordinating the information it receives from the sense organs, and making decisions as to the instructions sent to the ...

the developing human brain The Human Brain Project (HBP) is a large ten-year scientific research project, based on exascale supercomputers, that aims to build a collaborative ICT-based scientific research infrastructure to allow researchers across Europe to advance knowledge in the fields of neuroscience, computing, and brain-related medicine. The Project, which started on 1 October 2013, is a European Commission Future ...

the developing human brain Before birth and early in life, the developing brain is acutely sensitive to its environment. A symposium at the Fifth Annual Aspen Brain Forum, hosted by the New York Academy of Sciences in New York City, explored how certain social and psychological aspects of environment influence biology and behavior.

the developing human brain CTE is a brain disease that can only be diagnosed after death. It has been linked to specific changes in the brain that affect how the brain works. The research to-date suggests that CTE is caused in part by repeated traumatic brain injuries, including concussions, and repeated hits to the head, called subconcussive head impacts.

the developing human brain MDMA affects the brain by increasing the activity of at least three neurotransmitters (the chemical messengers of brain cells): serotonin, 89,90 dopamine, and norepinephrine. 91 Like other amphetamines, MDMA enhances release of these neurotransmitters 89–92 and/or blocks their reuptake, 93,94 resulting in increased neurotransmitter levels within the synaptic cleft (the space between the ...

the developing human brain We tend to trust what goes on in our brains. After all, if you can't trust your own brain, what can you trust? Generally, this is a good thing — our brain has been wired to alert us to danger, attract us to potential mates, and find solutions to the problems we encounter every day.
