1838 1859 Darwin's finches (also known as the Galápagos finches) are a group of about  
fifteen species of passerine birds. They are well known for their remarkable diversity  
in beak form and function. They are often classified as the subfamily Geospizinae or  
tribe Geospizini. They belong to the tanager family and are not closely related to the  
true finches. The closest known relative of the Galápagos ...

the development of darwins theory natural history natural theology and natural selection  
1838 1859 Darwinism is a theory of biological evolution developed by the English  
naturalist Charles Darwin (1809–1882) and others, stating that all species of  
organisms arise and develop through the natural selection of small, inherited variations  
that increase the individual's ability to compete, survive, and reproduce. Also called  
Darwinian theory, it originally included the broad concepts of ...

1838 1859 The Gulf of Maine Area program is the regional ecosystem project of the global  
Census of Marine Life, which seeks to explain the diversity, distribution, and abundance  
of life in the ocean. Research from this program will contribute to the development of  
ecosystem-based management (EBM) in the Gulf of Maine and around the world.

1838 1859 The Descent of Man, and Selection in Relation to Sex (1871) lays out how the  
principle of sexual selection could produce the splendid variety of animal life forms.  
This was Darwin's way of explaining how human beings descended from animals. More to  
my point, however, this was Darwin's way of accounting for the variations required  
before his principle of natural selection could promote some ...
