the development of modality in greek and english child languagemodality in argumentation a semantic investigation of the role of modalities in the structure of arguments with an application to italian Modal logic is a type of formal logic primarily developed in the 1960s that extends classical propositional and predicate logic to include operators expressing modality. A modal "a word that expresses a modality" qualifies a statement. For example, the statement "John is happy" might be qualified by saying that John is usually happy, in which case the term "usually" is functioning as a modal.
