the development of prime number theory from euclid to hardy and littlewood " There are infinitely many prime numbers: (prime P : only factors of P are 1 and P) " Suppose not. So there is a largest prime; P_N . Let $M = 2 \times 3 \times 5 \times 7 \times 11 \times 13 \times 17 \times \dots \times P_N$ (product of all primes) Note that none of these primes can divide $M+1$ (remainder is 1). But $M+1 = q_1 \cdot q_2 \cdot q_3 \cdot q_4 \cdot q_5 \cdot q_n$, product of primes, by.
